Metaverse Trust Statement Kyoto

Kyoto Prefecture and the CiP Council, a general incorporated association, have established the "Metaverse Trust Statement Kyoto" as a guideline for those involved in the creation and utilization of metaverse platforms to voluntarily declare their commitment to ensuring the security and integrity of their metaverse platforms.

Freedom and Openness — 01

We aim to create a metaverse that people from every corner of the earth can freely and openly participate in, fostering creative innovation.

Tradition & Regionalism — 02

We will evolve the metaverse into a "platform" that showcases the multi-layered and diverse culture rooted in the long history and traditions of territories worldwide while also acknowledging unique regional cultures.

Global Outreach — 03

We will create content that allows people from both Japan and abroad to share value without constraints in distance, time, cost, or language.

Youth & Children — 04

By carefully addressing the negative impacts of graphic content portraying violence and sexual conduct, defamation, and social fragmentation, we aim to create a safe and inclusive metaverse platform.

Elderly & Disabled Individuals — 05

We aim to create an inclusive metaverse platform where users can choose services tailored to their lifestyle and needs to achieve happiness in many forms.

Technology & Research — 06

By sharing our data openly with the world, we will advance the pursuit and development of technology through open innovation that transcends time and space.

Trial & Error — 07

Using both "physical" and "virtual" platforms, we will promote the proof-of-concept for optimal dissemination of technology within the metaverse.

Security & Trust — 08

We will strive to maintain and build trust through proper measures for privacy and cybersecurity, which are essential for maximizing the value of the metaverse.

Morality — 09

We will take responsibility for the authenticity and accuracy of data, lead continuous mutual coordination, and create a just metaverse community.

The Future — 10

We will create a future-proof metaverse where all people and assets can transcend borders, knowledge and information can be shared, and new value can be generated.
